Presenters:_____   Total: _____

	Strong	Acceptable	Needs Work
Organized Presentation	Has clear structure - beginning, middle, end, and final summary, with a logical flow between topics.	Has some structure, but parts do not seem to fit together as well as they should	Very poor structure. Pieces seem to have no logical order.
Delivery	Speech is easy to hear and understand, and appropriate demonstration materials are used (e.g. slides). Visual aids are well designed (e.g. slides are not overly text heavy).	One of speech or materials is good, but the other is lacking.	Speech is difficult to hear and/or understand, and appropriate visuals are lacking.
Project Content	Problem and data source are clearly described, good experimental design and statistical analysis, clear presentation of results.	Basic description of what was done is present, but lacks clarity in some components. Results are based on reasonable experiments, but they are not statistically robust.	Important content is missing and/or the results are presented without context interpretation. Experimental design may invalidate results (e.g. testing on the training data).
Timing	Presentation makes good use of available time and does not run over.	Presentation is several minutes short of available time, or runs over.	Presentation does not use the available time, or has to be cut off without getting near the end (e.g. runs over so far it must be cut off).
Response to Questions	Makes sure the question is understood. Repeats it so everyone hears it. Answers clearly and accurately.	Answers correctly, but not careful about understanding and responding to the question asked.	Does not handle questions well.
