## CS41 Lab 10: NP-Completeness

Thursday, April 2

This week, we've worked hard to understand the notion of problems in NP, escpecially those that are NP-Complete problems. In this lab, we'll look at two additional NPC problems. Recall that to show a problem  $A \in \text{NPC}$ , it suffices to:

- Prove that  $A \in NP$ .
- $\bullet$  Choose a problem B known to be NP-Complete.
- Reduce  $b \leq_{\mathbf{P}} A$ .

During this lab, focus initially on the reductions, and not the formal proofs.

- 1. Show that  $3\text{-SAT} \in \text{NPC}$ , by reducing from SAT. Given an instance X of SAT (i.e., a list of n variables and m clauses), you should create an instance Y of 3-SAT (i.e., a list of n' variables and m' clauses, each clause having three literals) such that  $Y \in 3\text{-SAT}$  iff  $X \in \text{SAT}$ .
- 2. In the third exercise, you will show that Three-Coloring is NP-Complete. Before getting there, it will be helpful to create some interesting three-colorable graphs. In all of the following exercises, you are to create a three-colorable graph (say the colors are red, blue, green) with certain special properties. The graphs you create should include three vertices marked a, b, c but can (and often will) include other vertices. Except for the properties specified, these vertices should be *unconstrained*. For example, unless the problem states that e.g. a cannot be red, it must be possible to color the graph in such a way that a is red. (You may fix colors for other vertices, just not a, b, c, and not in a way that constrains the colors of a, b, c.)
  - Create a graph such that a, b, c all have different colors.
  - Create a graph such that a, b, c all have the same color.
  - Create a graph such that a, b, c do NOT all have the same color.
  - Create a graph such that none of a, b, c can be green.
  - Create a graph such that none of a, b, c are green, and they cannot all be blue.
- 3. Show that Three-Coloring ∈ NPC. Hints: reduce from 3-Sat. Associate the color red with True and the color blue with False.
