

worst-case runtime $O(n^2)$

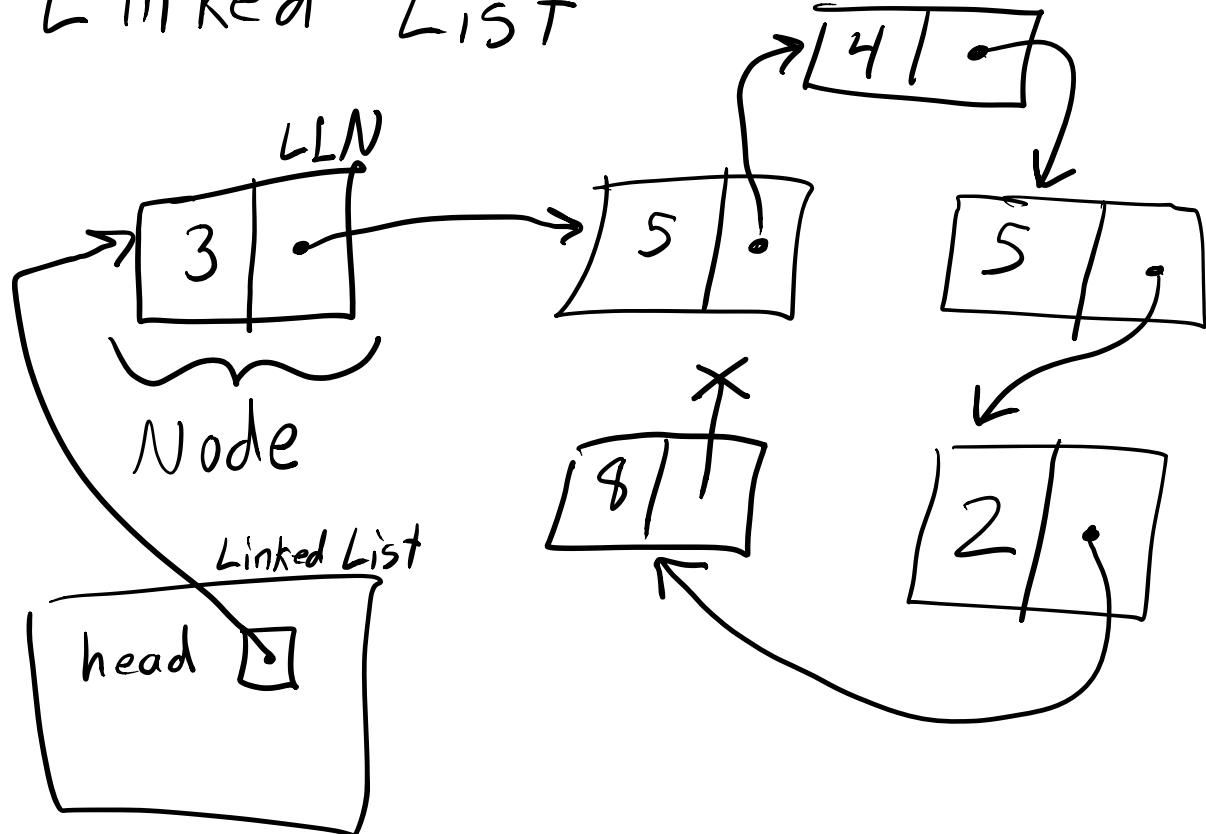

expected worst-case runtime $O(n \log n)$

List :

- get item at index
 - set item at index
 - get size
 - insert item
 - remove item
 - . . .
- check
index

Abstract Data Type ADT

Linked List

Method getSize () :

```
if ( head is null ):  
    return 0
```

```
len = 1
```

```
node_ptr = head
```

```
while( !(node_ptr -> next == nullptr) )
```

```
    node_ptr = node_ptr -> next
```

```
    len ++
```

end while
return len

Invariant :

this->size always stores
the number of nodes in this list
