Announcements

• Welcome back!

• Protocol meeting sign up on Piazza.
  – Sign up **TODAY**! Meetings this week...

• If you want to talk about lab 3, stop by soon!

• Today: Exam info, then Q&A review
  – Normal office hours this week too.
CS 43
Midterm Info
Scheduling

• Midterm is in SCI 101 during normal class time (2:40 – 3:55) on Thursday, October 26.
Format

• A few important definitions.

• A few short answer questions.

• A few multi-part depth questions.
Hints

• You don’t need to shotgun me with info.
  – If it says to be brief, don’t write a ton.
  – I will grade all of what you write.

• I try to specify approximately how much text I’m looking for.
  – When it’s not explicit, you can usually guess by the point value of the question and blank space.
Hints

• For many questions, the point value roughly corresponds to how many things I’m looking for in your response.
  – 3 points: describe 3 things...

• Numerical questions: showing work can help you get partial credit

• Explanation/Why questions: I’m generally looking for a text answer. You can use examples/numbers as supporting evidence though.
Fair game...

- Abstraction, Layering, End-to-end design
- HTTP, DNS, Email, BT, etc. (app protocols)
- Basics of distributed systems
- The transport layer, UDP, TCP (minus flow and congestion control)
- Concurrency, application structure, and blocking
- The functions & protocols we highlighted in labs
- (Anything else we talked about in class)
Examples:
Examples: Cacti
Definitions

• Response: ~1-2 sentences

• Cactus example:

  spine

  Cactus spines are modified leaf structures that provide protection against herbivores and aid in the reduction of water loss.
Cactus example:
In class, we talked about several common cactus body types. Choose three, and briefly describe their characteristics.

Columnar – Tall, large, sparse columns, like the Saguaro
Globular – Singular barrel-like shape
Clumping – Group of small, usually round stems closely clustered together
Multi-Part

• Response: depends on part and point value
  – *Usually* earlier Q’s are fewer points and shorter

Cactus Classification

A. (1 pt) What is the relationship between cacti and succulents?

B. (2 pt) Why is it difficult to classify cacti?

C. (4 pt) How have genetic markers been used to classify cacti?
A. (1 pt) What is the relationship between cacti and succulents?
   All cacti are succulents, not all succulents are cacti.

B. (2 pt) Why is it difficult to classify cacti?
   Cacti pollination is not selective, leading to many hybrid species for which there is no classification. Furthermore, different groups using different naming systems, adding more confusion to cactus classification. (ex optional)

C. (4 pt) How have genetic markers been used to classify cacti?
   (I have no idea.)
Exam logistics questions?
