

# CS 43: Computer Networks

## Course Introduction

Kevin Webb

Swarthmore College

January 25, 2022

# What This Class Is About

- How networks (focus on the Internet) work
- How applications that use networks work
  - HTTP, DNS, Email, etc.
- How to write programs that communicate over networks
- How different protocols, policies, and mechanisms interact to provide an effective communication medium

# Instructor: Kevin Webb

- <http://www.cs.swarthmore.edu/~kwebb/>
- Please call me Kevin (or Professor Webb)
- Research: Control platforms for networks, CS Education

# Instructor: Kevin Webb

- <http://www.cs.swarthmore.edu/~kwebb/>
- Please call me Kevin (or Professor Webb)
- Research: Control platforms for networks, CS Education
- Hobbies: Building stuff, cactus/fruit plants, PC games

Bastian (8)

Bailey

# Office Hours

- Tuesday 10:30 AM – 11:30 AM
- Thursday 2:35 PM (after class) – 4:10 PM
  - NOTE: Faculty dept. meeting at 4:15 on Thursdays
- By appointment, and you're welcome to stop by when door is open
- 255 Science Center

# Resources

- EdSTEM Q&A Forum, Github Enterprise
  - <https://edstem.org/us/courses/17340/discussion/>
  - <https://github.swarthmore.edu>
- Slides & audio recordings on course website
- Lab sections:
  - Science Center 240
  - Friday 2:15-3:45, Friday 4:00-5:30

# Email Policy

- For public questions: use EdSTEM!
  - Your classmates benefit from your questions
  - Your classmates can answer your questions
  - I will check the forum frequently
- For private questions: use email
- I will attempt to respond to within 24 hours (usually more quickly)

# How does this class work?

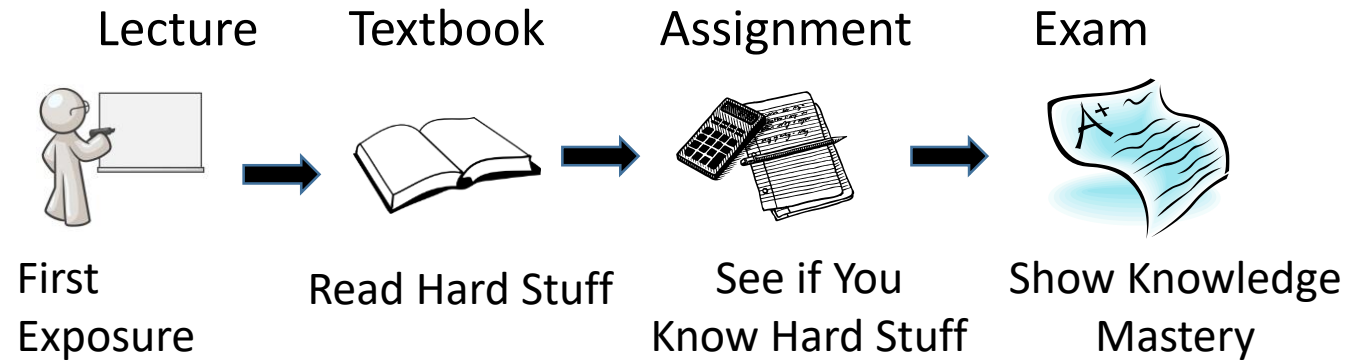

- This class is designed a bit differently from what you might normally be used to:
  - Class will be centered around you
  - Requires your participation
- Ever considered why we have lectures?

## Traditional Lectures:

- Roughly one millenium old

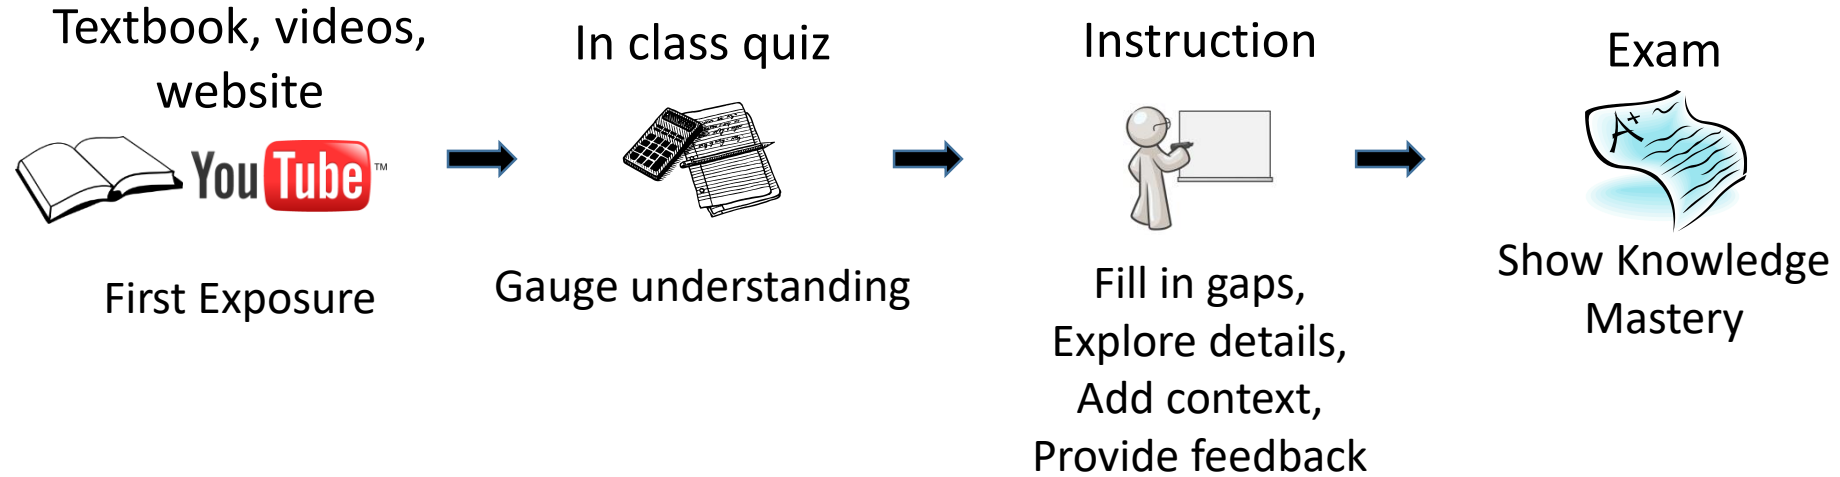

# Traditional Lectures:

- Little opportunity for expert feedback
- Might as well skip class and watch video lectures!
  - (I am not actually suggesting this. Please attend your classes!)

# Interactive Classes with Peer Instruction

- You do the “easy” part before class.

- Class is reserved for interactive, customized experiences
- Research on how people learn:
  - Everyone constructs their own understanding
  - To learn, YOU must actively work with a problem and construct your own understanding of it

Clicker

- Lets you vote on questions in real time.
- Like pub trivia, but the subject is always networks.
- You NEED one of these for the course!

# Peer Instruction

- Short quiz at the beginning of class
- During class: pose carefully designed questions
  - Solo vote: Think for yourself and select answer
  - Discuss: Analyze problem in teams of 3
    - Practice analyzing, talking about challenging concepts
    - Reach consensus
    - If you have questions, raise your hand and I'll come over
  - Group vote: Everyone in group votes
    - You must all vote the same to get your point
  - Class wide discussion:
    - Led by YOU (students) – tell us what you talked about in discussion that everyone should know!

# Why Peer Instruction?

- You get a chance to think.
- I get feedback as to what you understand.
- It's less boring!
- Research shows it promotes more learning than traditional lectures.

# Giving out Candy

- To people willing to
  - Ask a question
  - Share an explanation
  - Summarize what their group talked about
- Your explanations are **CRITICAL** for fellow students' learning

# Clicker Registration

- <https://forms.gle/axs7yhLSDbYpyH5S6>
- Please register ASAP

# Example Question

- Individual vote
- Group discussion / group vote
  - Room should be LOUD
- Class discussion

How many of the following...

A: 0

B: 1

C: 2

D: 3

E: 4

- (Question hidden for comedic effect)

# Grading

- 5% Reading Quizzes
- 5% Class participation
- 25% Midterm Exam
- 30% Final Exam
- 35% Programming Assignments

# Grading

- ~~5% Reading Quizzes~~
- 7.5% Class participation
- 25% Midterm Exam
- 30% Final Exam
- 37.5% Programming Assignments

For this credit, you need to be present and responding via clicker. NOT graded for correctness.

I'll drop three no-shows, no questions asked.

# Textbook

- *Computer Networks: A Systems Approach*
- <https://book.systemsapproach.org/>

# Policies

- Collaboration
  - You may discuss approaches, not solutions
  - You must submit your own work
  - Exams will include questions on programming
- Cheating
  - Zero tolerance for cheating, don't do it!
- Lab Lateness
  - 2 days of extra (at the granularity of days)
  - Let me know **after** you've submitted

# Tentative Schedule

- Midterm – March 15, in class
- Final - TBD
- Labs
  - Out on Fridays (lab section)
  - Due on Thursdays

# Administrative Questions?

- All of this info (should be) on class website
- Feel free to ask on discussion board

# What is the goal of a network?

- Allow devices communicate with one another and coordinate their actions to work together.
- Piece of cake, right?

# A “Simple” Task

- Send information from one computer to another
  - Endpoints are called hosts
    - Could be computer, iPod, cell phone, etc.
  - The plumbing is called a link
    - Many different physical technologies: Ethernet, wireless, cellular, etc.

Host  
(PC)

Link

Host  
(Server)

# Not Really So Simple...

Host  
(PC)

Link

Host  
(Server)

# Not Really So Simple...

# Not Really So Simple...

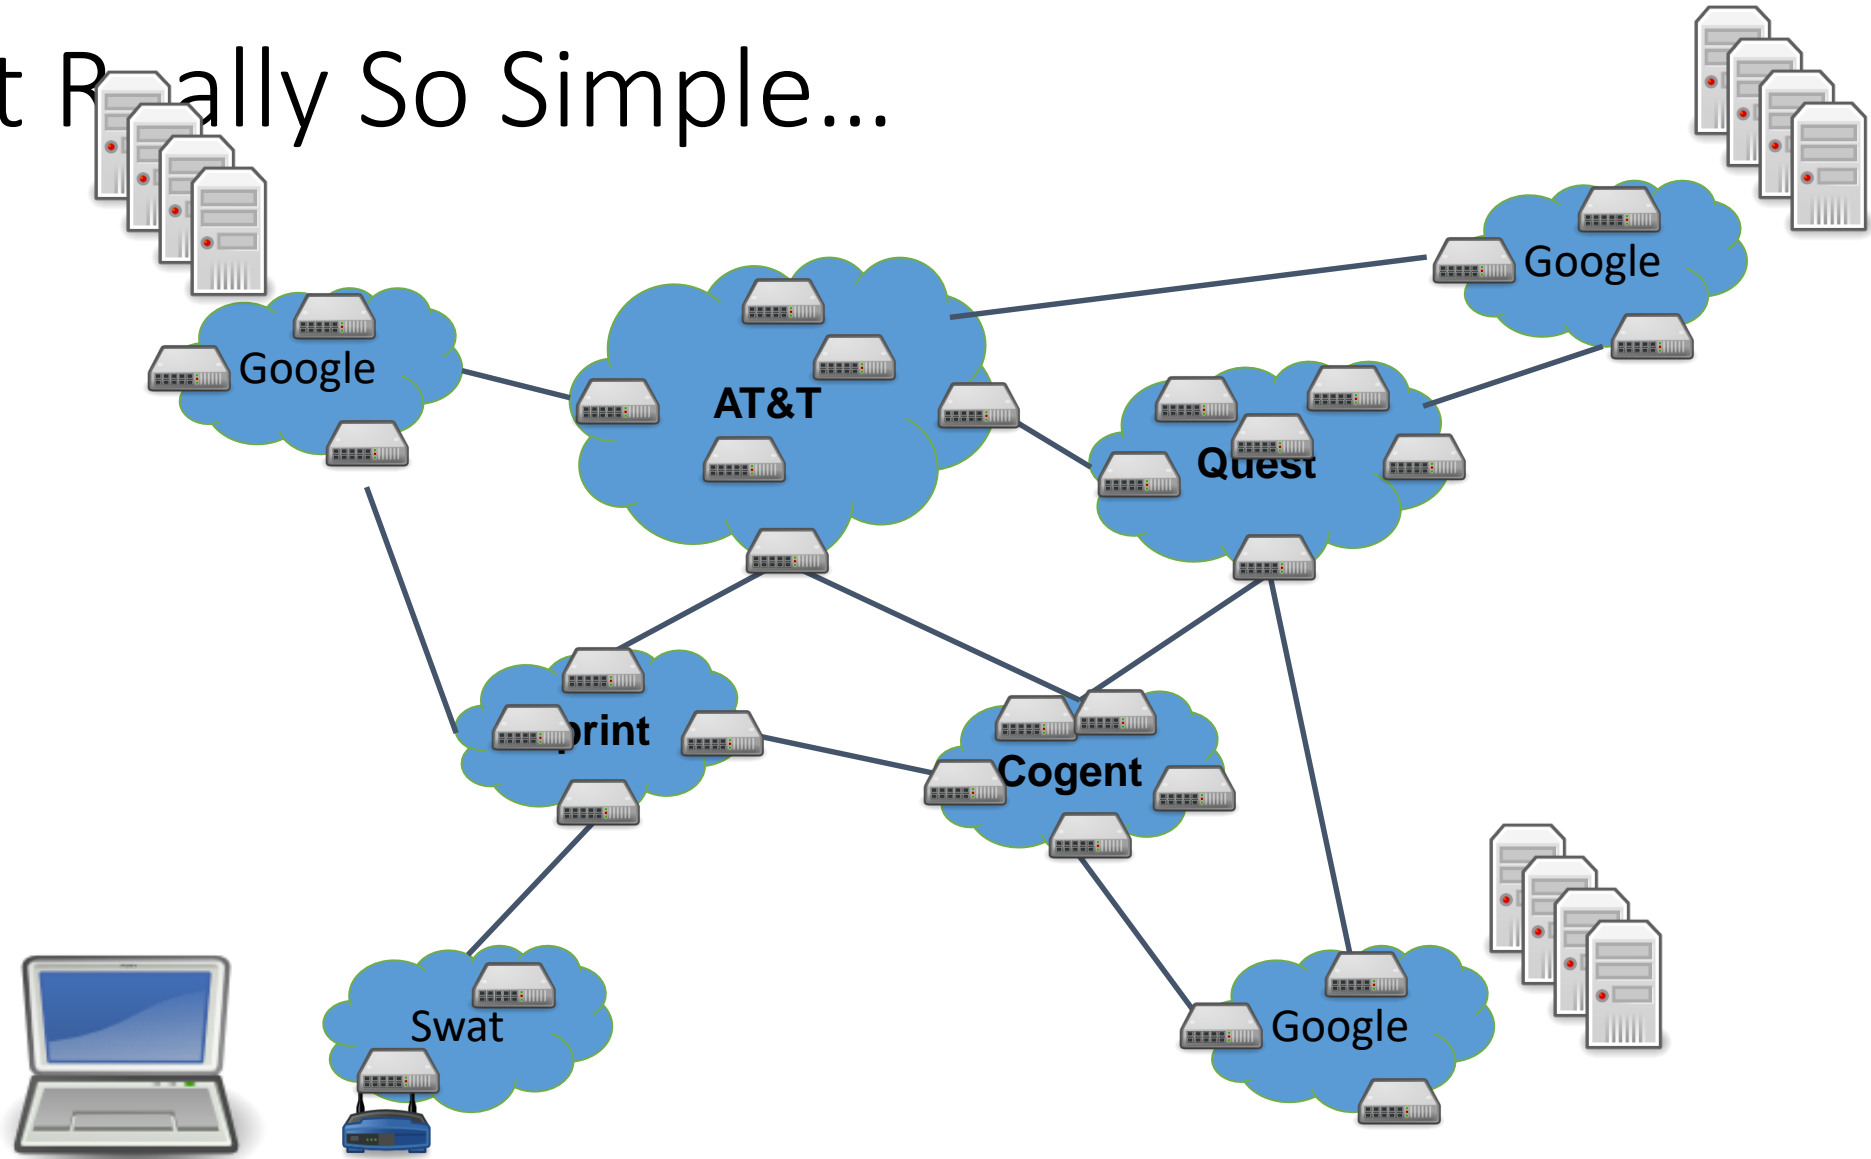

# Not Really So Simple...

# Not Really So Simple...

# We only need...

- Manage complexity and scale up
  - Layering abstraction: divide responsibility
  - Protocols: standardize behavior for interoperability

# We only need...

- Manage complexity and scale up
- Naming and addressing
  - Agreeing on how to describe/express a host, application, network, etc.

# We only need...

- Manage complexity and scale up
- Naming and addressing
- Moving data to the destination
  - Routing: deciding how to get it there
  - Forwarding: copying data across devices/links

# We only need...

- Manage complexity and scale up
- Naming and addressing
- Moving data to the destination
- Reliability and fault tolerance
  - (How) can we guarantee that the data arrives?
  - How do we handle link or device failures?

# We only need...

- Manage complexity and scale up
- Naming and addressing
- Moving data to the destination
- Reliability and fault tolerance
- Resource allocation
  - How do we share the network's capacity?

# We only need...

- Manage complexity and scale up
- Naming and addressing
- Moving data to the destination
- Reliability and fault tolerance
- Resource allocation

(Lots of others too.)

# Pull back the curtain on the Internet

# Why should you care?

- To know how the Internet works
  - What may be wrong with your networks
  - When was the last time you went 24 hours without going online?
- Network programmers in demand
  - How many applications aren't online these days?

# The Internet is Exciting!

- Rapid growth and success.
  - 1977: 111 machines on Internet
  - 1981: 213
  - 1983: 562
  - 1986: 5000
  - 1989: 10,000
  - 1992: 1,000,000
  - 2001: 150 – 175 million
  - 2002: > 200 million
  - 2011: > 2 billion (~1B are phones/tablets)

# Global Internet Device Sales

Source: Gartner, IDC, Strategy Analytics, Company Filings, BI Intelligence Estimates

# The Internet is Exciting!

- Rapid growth and success.

# The Internet is Exciting!

- Rapid growth and success.
- We're here at the beginning.
  - Most of the growth happened in our lifetime.
  - Still TONS of untapped potential.

Founded 1998

Founded 2004

# The Internet is Exciting!

- Rapid growth and success.
- We're here at the beginning.
- Communication is empowering.

# The Internet is Exciting!

- Rapid growth and success.
- We're here at the beginning.
- Communication is empowering.

(Late 60s)

# TODO List

- See EdSTEM: how to choose lab 1 partners
- Complete Lab 0!
- Register your clicker!
- Please let me know about:
  - Your preferred name/pronouns, if different than roster information
  - Academic accommodations
