

Practice with two-dimensional arrays
All examples are available in my public directory.

① array1.cpp (static 2d array)

```
int array2d[3][4];  
for (int i=0; i<3; i++) {  
    for (int j=0; j<4; j++) {  
        array[i][j] = i*j;  
    }  
}
```

array2d[0] →

0,0	0,1	0,2	0,3
0	0	0	0

array2d[1] →

1,0	1,1	1,2	1,3
0	1	2	3

array2d[2] →

2,0	2,1	2,2	2,3
0	2	4	6

② array2.cpp (Dynamic 2d array)

```
int** array2d;  
array2d = new int*[3];  
for (int i=0; i<3; i++) {  
    array2d[i] = new int[4];  
    for (int j=0; j<4; j++) {  
        array2d[i] = i*j;  
    }  
}
```

③ array3.cpp (Dynamic array storing dynamic objects)

```
Person*** array2d;  
array2d = new Person** [3];  
for (int i=0; i<3; i++) {  
    array2d[i] = new Person* [4];  
    for (int j=0; j<4; j++) {  
        array2d[i][j] = new Person (to-string(i),  
                                     to-string(j));  
    }  
}
```
