

Student(s):

Project Presentation, CS81 Fall17

1. Presented the project in a top-down manner. Clearly stated the motivation for the project and the goal/hypothesis for the research.
2. Described the experimental procedure in detail. Explained the machine learning techniques used and provided examples of the data.
3. Analyzed the results both quantitatively and qualitatively. Highlighted whether the results supported the overall project goal/hypothesis.
4. Slides used text sparingly, and focused on images, graphs, and figures to illustrate the key points.
5. The presentation had a well practiced narrative flow with smooth transitions between sections. The speaker stood calmly, looked at the audience, and spoke slowly and clearly.
