```cpp
#include <iostream>          ← give me I/O libraries

                                    make easier references
using namespace std;    ←

                        main — where program starts
int main() {
   cout << "Hello; world!" << endl;    ←   prints "Hello, world!" (and newline)
type annotation
      return 0;   ←   return for main (which must return int)
}
